

# ESHTHA BANGA

Full-Stack Developer | AI/ML Enthusiast

Gurgaon, Haryana | eshthabanga@gmail.com

[LinkedIn](#) | [GitHub](#) | [Portfolio](#)

## PROFESSIONAL SUMMARY

B.Tech CSE (AI/ML) student and full-stack developer with hands-on experience building AI-powered applications, blockchain-based platforms, and responsive web products. Proficient in Python, JavaScript, React.js, and Generative AI, with 47+ public repositories reflecting consistent, independent project delivery. Currently contributing to technical teams across multiple student-led organizations, with a strong focus on turning ideas into functional, user-centered digital experiences.

## EDUCATION

|                                                                                                                 |                |
|-----------------------------------------------------------------------------------------------------------------|----------------|
| <b>KR Mangalam University</b> , Gurgaon, Haryana<br><i>B.Tech in Computer Science Engineering (AI &amp; ML)</i> | 2025 – Present |
| <b>BS International School</b> , West Delhi<br><i>Class XII</i>                                                 | 2024 – 2025    |

## TECHNICAL SKILLS

**Languages:** Python, JavaScript, TypeScript, SQL  
**Frameworks:** React.js, Node.js, Tailwind CSS, HTML5, CSS3  
**Backend/Cloud:** MongoDB, MySQL, RESTful APIs, Supabase, Firebase  
**Web3:** Blockchain Concepts, Decentralized Application (dApp) Design  
**AI:** Generative AI, Pandas, NumPy  
**Tools:** Git, GitHub, Figma, Vercel, VS Code, UI/UX Design

## EXPERIENCE

|                                                                                                                                                                                                                                                                                                             |                     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| <b>GeekRoom KRMU</b> — <i>Core Team Member</i> Sep                                                                                                                                                                                                                                                          | 2026 – Present      |
| <ul style="list-style-type: none"><li>Serve as a core team member driving technical initiatives and community-facing developer activities for the campus tech community.</li><li>Collaborate with peers on event execution, technical content, and project support within the GeekRoom ecosystem.</li></ul> |                     |
| <b>Thrylos</b> — <i>Technical Team Member (Remote)</i>                                                                                                                                                                                                                                                      | Jan2026 – Jul 2026  |
| <ul style="list-style-type: none"><li>Lead tech administration initiatives, coordinating technical operations across ongoing remote team projects.</li><li>Collaborated with cross-functional members to plan, build, and deliver technical solutions on schedule.</li></ul>                                |                     |
| <b>Tech TribeX</b> — <i>Technical Team Member (Remote)</i>                                                                                                                                                                                                                                                  | Sep 2025 – Aug 2026 |
| <ul style="list-style-type: none"><li>Contributed to the core tech team, supporting development, React.js implementation, and SEO-focused technical execution.</li><li>Worked collaboratively with peers to troubleshoot issues and refine product features across a one-year engagement.</li></ul>         |                     |

## PROJECTS

|                                                                                                                                                                                                                                                                                                                                   |  |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| <b>Question Forge AI</b> , <i>Python, Generative AI, Web Frameworks</i>                                                                                                                                                                                                                                                           |  |
| <ul style="list-style-type: none"><li>Engineered an automated academic assessment tool using Generative AI and Bloom's Taxonomy to generate balanced question papers.</li><li>Developed backend architecture in Python, integrating LLMs to dynamically process and scale educational parameters.</li></ul>                       |  |
| <b>Shared Network Data Annotation OS</b> , <i>Python, Distributed Systems, RTOS</i>                                                                                                                                                                                                                                               |  |
| <ul style="list-style-type: none"><li>Designed a real-time, distributed OS concept for high-throughput data annotation pipelines with RTOS-style CPU scheduling.</li><li>Architected multi-client windowing and dynamic concurrency queues to enable secure, simultaneous labeling across cloud, edge, and local nodes.</li></ul> |  |
| <b>Club Reporting &amp; Donor Transparency Platform</b> , <i>Web App, Automation, Financial Reporting</i>                                                                                                                                                                                                                         |  |
| <ul style="list-style-type: none"><li>Built a platform automating donation, expense, and donor-wise fund reporting for charity clubs to replace manual tracking.</li><li>Designed data flows to improve reporting accuracy and financial transparency for club administrators and donors.</li></ul>                               |  |
| <b>VANGUARD</b> , <i>React.js, Vite, Tailwind CSS, Recharts</i>                                                                                                                                                                                                                                                                   |  |
| <ul style="list-style-type: none"><li>Built a real-time cybersecurity threat-intelligence dashboard that parses CVE data into an interactive command-center UI.</li><li>Implemented dynamic severity filtering and visual analytics (donut and bar charts) using Recharts and React Router for seamless SPA navigation.</li></ul> |  |
| <b>notedbyaddie</b> , <i>HTML5, UI Design</i>                                                                                                                                                                                                                                                                                     |  |
| <ul style="list-style-type: none"><li>Designed and deployed a lightweight, single-page notes web app (notedbyaddie.vercel.app) with a clean, minimal interface.</li></ul>                                                                                                                                                         |  |

## CERTIFICATIONS

- Machine Learning & Natural Language Processing Workshop — Certificate of Completion, K.R. Mangalam University (COE – AI)
- AI For All — Certificate of Participation, Tech4Hack in support of Assist Flow, Microsoft Office Gurugram (Jan 2026)
- IDEAS 3.0 — Certificate of Appreciation for Project Display (RC Car), K.R. Mangalam University Innovation & Ideathon Fest (Nov 2025)
